PAYSURE STRATEGIC BRIEFING

September 18th, 2026

Under 3 Seconds.

The window between a tap and a total loss

Digital Payments are engineered for irreversible speed, meaning scammed users, lose their money without warning in 2026's instant-settlement economy.

PAYMENT FINALITY

Instant settlement protocols leave zero room for transaction recall or dispute initiation

SOCIAL ENGINEERING

Fraudsters exploit urgency, forcing high-value decisions within seconds of contact.

UPI Fraud Losses in India (FY22-FY26)

₹ Crore by Financial Year

Hidden Warnings, Zero Friction

Current banking applications prioritize transaction completion velocity over user safety, hiding critical risk alert in unreadable tiny text.

VELOCITY PARADIGM

ALERT VISIBILITY

Warnings exist, but no one reads them.

CONFIRMATION FLOW

Speed is prioritized over checking who you're actually paying.

RISK CONTEXT

The information that matters is buried, not shown.

PAYSURE FRAMEWORK

CONTEXTUAL FRICTION

Risk is shown clearly, sized to how serious it actually is.

INTENTIONAL VERIFICATION

A deliberate pause stands between impulse and an irreversible payment.

TRANSPARENT INDICATORS

New recipients and known scam tactics are surfaced instantly, not buried.

A VISUAL WALKTHROUGH

The image shows the PaySure Transaction safety checker interface. At the top, there's a logo for PaySure and a 'Dark' theme toggle. Below the logo are four icons: a shield, a rupee symbol, a lock, and a warning triangle. The main navigation bar has four tabs: 'Pay', 'History', 'Recipients', and 'Checklist'. The 'Pay' tab is active. Below the tabs, there's a 'New transaction' section with a sub-header 'Enter details to run the safety check before sending.' The form includes fields for 'Recipient name' (with a placeholder 'e.g. Rahul Sharma'), 'Amount' (with a rupee symbol and '0'), 'Payment type' (a dropdown menu showing 'UPI'), and 'Category' (a dropdown menu showing 'Personal'). There's also a 'Note (optional) / नोट (वैकल्पिक)' field with a placeholder 'What's this transaction for? / यह भुगतान किसलिए है?'. At the bottom of the form is a large blue button labeled 'Run safety check'.

Pay: Enter transaction details and run a safety check before sending money.

Risk assessment

Medium risk

55%

⚠ New recipient, high amount

You haven't paid Kushagra Saxena before and this is ₹20,000. Please verify the recipient's name and UPI ID before proceeding.

ⓘ Large first-time payment

Sending ₹20,000 to a first-time recipient carries high risk. Consider a smaller test payment first.

Proceed to confirm

Risk Assessment: Identifies potential risks and explains why a transaction may be unsafe.

Confirm transaction

Medium risk

One Engine. Powerful Results.

A modular four-layer architecture runs your transaction through a set of predefined rules to output an explainable risk score.

01

INGESTION

Aggregating transaction details: amount, recipient, payment type, and note

02

LOGIC LAYER

Cross-referencing the Indian scam pattern library for known fraud triggers

03

RISK MEASURING

Weighted rule scoring – each triggered rule adds a fixed weight to a running total

04

INTERPRETATION

Generating a plain-language reason breakdown for the user

What makes us unique?

This is where PaySure stops being a checklist and starts being a safety net.

- 01 Composite Risk Score
- 02 Cooling off period
- 03 Indian scam pattern library.
- 04 Spot the scam feature.

PAYSURE DIFFERENTIATING FEATURES BREAKDOWN

Four Screens Between You And A Mistake

Every payment moves through the same guarded path — enter, assess, pause, confirm.

IMPACT & FEASIBILITY

Built For The People Who Lose The Most

Lightweight enough to run today. Aimed at the users existing apps overlook.

WHO IT'S FOR

First-time digital payment users, senior citizens, and rural users adopting UPI for the first time — the group most targeted and least protected.

LIGHTWEIGHT & PRIVATE

Fully simulated prototype, no real bank data touched, everything stored locally.
